**Date:** Wednesday, February 06, 2008 8:55:33 AM

---

[REDACTED],  
On the file for orno 193150 you actually submitted 299 but two did not load because they were duplicates, leaving the total 297. I've added the last group you submitted in the last email which gives you a total of 300 for orno 193150. We will pull two envelopes of 100 seed each for this order.

I believe we have taken care of all the questions/problems for both your requests so we should be able to begin the processing. However, I wanted to let you know that we are short staffed as of right now and we have a lot of requests that are being processed since this is the busy time of year for getting ready for regeneration. We will try to have the seed to you by your requested date of April 1st, if I see that we will not be able to meet the date I will let you know. If you would like, I can email you when we get ready to ship the material.

Thanks for your quick responses, and please let me know if you have any further questions.

Tiffany

Tiffany,

I'll need to add 3 items to order 193150 "origin correlation" to have a total of 300 items. I thought I had been pretty sure to include 300 items in my list, but I guess not. I apologize for the mistake. Please add PIs #,

329416, 527100, and 584227

Tiffany,

For order #193150 "origin correlation" please replace the problem accessions with the following PIs; 521252, 156388, 156510, 525001, 457280

I also need to add 5 PIs to order #193149 "2008 ps exotics" so as to have a total of 2900 accessions.

Please add PI #s; 584161, 584162, 584164, 584167, 584168

[redacted]

"Fields, Tiffany" Tiffany.Fields@ARS.USDA.GOV wrote:

[redacted],

I loaded the replacement accessions into the order and deleted the group you mentioned below (481830-481850) which leaves you with 2,895 accessions into order no. 193149. This is the first file you submitted, '2008 ps exotics'. The duplications I spoke about in the earlier email were actually in this one file.

As far as order no. 193150, which is the 'origin correlation' file you have the following problems/questions:

PI 221252 is not a valid ID in GRIN.

PIs 156389, 156375 are both 'LOW' and are not available at this time.

PI 525002 is 'EXHAUSTED' and will not be available at this time or in the future.

PI 457279 is marked as a 'FLAW' right now with questions about the seed matching the original sample. I have scanned in both inventories and emailed them to the sorghum curator, Dr. John Erpelding, in Puerto Rico to see if they do indeed match. As of right now this accession is not available until he checks the inventories.

Please let me know how you would like me to proceed.

Thanks,  
Tiffany

Subject: Re: Sorghum germplasm request

Tiffany,

I've attached a file with a list of replacement PI numbers for the ones you listed as having problems. In addition, I realized that I mistakenly included PIs 481830-481850 in my original request, and replaced them in the attached file. Also, were the 39 duplicates you mentioned duplicated between the two files I originally sent, or within only one of the files? The two files represent separate tests and I expected there to be duplications between them. If the duplications are within the same file, I included 39 new PI numbers in the attached file to replace the duplications. But if the duplications are between the two files, that's OK, and I will be needing 3 seed packets of those accessions if possible (1 for the "2008 ps exotics" file and 2 for the "origin correlation" file). I should have clarified that

earlier.

your help,

I have started loading the items into orno 193149 to begin the processing for your '2008 ps exotics pi list'. However, there were approximately 39 duplicate inventories on your list as well as the following problems/questions:

The following inventories are not sorghum and belong to another site:

PI 273654 (Squash - Cucurbita maxima - NE9)

PI's 463489, 463490, 463491, 463492 (Panicum milliicum subsp. millaceum - NC7)

The following are 'LOW' and are not available at this time at our site:

PI's 330973, 481849, 524871, 562162, 562240

The following is an 'EXHAUSTED' accession, which means it will no longer be available in the future - PI 527234

The following are 'QUAR' at NSSL and are not available:

PI's 524797, 501047, 501074, 526729, 526738, 545558, 545581, 524773

The following have been 'NULLED' at NSSL, which means they will no longer be available in the future:

PI's 526757, 481839, 524737,

The following have no inventories in our database:

PI's 330994, 286556, 267540, 287619, 585680, 524606, 482967

If you could please look over the list and let me know the correct ID's for the questions highlighted in red above, I can add them to your request.

However on all the 'LOW', 'NULL', 'EXHAUSTED', and 'QUARANTINED' material, we will not be able to provide that material.

Please let me know how you would like me to proceed.

Thanks,  
Tiffany

**Subject:** Sorghum Panel typos  
**Date:** Monday, March 09, 2009 2:48:02 PM

---

Cleve,

Merrelyn has found typos in three converted accessions within the sorghum association panel. Please let us know as soon as possible which number is correct.

1. SC 209 – According to Table 1 in Casa et al. (2008), the other IDs of this accession are IS 1151C and PI 533817. We think there was a typo in the Sorghum Conversion Master List which shows SC 209 with IS 1151C as the recurrent parent and PI 291232 as the preconverted line. In the PI books as well as the ICRISAT Master list, Merrelyn found that PI 291233 is IS 1151 or Aispuri while PI 291232 is IS 1148, G4, and Guntur 4. Therefore, we believe that the description of SC 209 should have PI 291233 as the preconverted line. Do you agree?
2. SC 706 – According to Table 1 in Casa et al. (2008), the other IDs of this accession are IS 3547C and No. 189. This doesn't match the Sorghum Conversion Master List which shows SC 706 with IS 2319 as the recurrent parent, PI 217837 as the preconverted accession, and No. 189. SC 709 (rather than SC 706) has IS 3547C as the other ID. Which is correct --- SC 706 or SC 709? If SC 706 is correct, then the secondary ID should be IS 2319C.
3. SC 888 – According to Table 1 in Casa et al. (2008), the other ID of this accession is IS 4495C. This doesn't match the Sorghum Conversion Master List which show SC 888 with IS 5590 as the recurrent parent, but SC 868 with IS 4495 as the recurrent parent. Which is correct --- SC 888 or SC 868? If SC 888 is correct, then the secondary ID should be IS 5590C.

We want to correct these errors prior to shipping the material and perpetuating more errors in the literature. Thanks for your assistance!

Bill,

Charles Woodfin already asked me to send them back to him, since they put the effort into growing, bagging, harvesting, threshing, etc. these lines. I'll do that if it is OK.

I have some questions on the panel (elite and converted) as the accessions I received do not exactly match the 377 accessions published in Crop Sci 48:30-40. I'll send an email to you and others with my questions on that later.

Bill,

No problem, we can do that. Do you really want the seed thrown out? We can "black box" them if you want (no distribution to anyone unless we are given permission by you), in case the restrictions are lifted down the road. I just thought I'd ask because I hate to throw away good seed. But I'll be happy to handle it however you want.

Bill,

In the upper right hand corner of each packet is the Field Plot # we used. Elite Panel used Plots 801 thru 969. The book that I handed out has the Plot #'s that we used. We also have the name on each packet sent. The plots that you want deleted are: Plots 804, 806,818,826,827,915,916,917,952. They also have the names on them. Sorry about the inconvenience.

Charlie:

After looking at the list of elite panel accessions, there are nine entries that probably should be deleted, as they haven't been released or they have been released with significant restrictions.

The entry numbers and source on the file are the numbers that you had provided to me when you sent the seed last spring.

If you've got any issues, please let me know and I'll give you a call.

Darrell - most of these are yours, but I expect they fall into that restricted category.....right?

Bill and Gary,

We are shipping seed of the sorghum association panel to five requestors today. As requested, we did not include your lines (nine Rooney and three Peterson). However, I have included your contact information (email only) regarding the restricted lines. That way any requestor can contact you directly and you can determine if they would be able to meet your restrictions to obtain any of these lines.

Take care,  
Gary

---

Bill,

No problem, we can do that. Do you really want the seed thrown out? We can "black box" them if you want (no distribution to anyone unless we are given permission by you), in case the restrictions are lifted down the road. I just thought I'd ask because I hate to throw away good seed. But I'll be happy to handle it however you want.

Gary

**Subject:** FW: list of lines that should NOT be sent onward for the ELITE panel

Gary:

I just got this from Charlie. If you could just toss the seed of the following plots, it will solve a LOT of potential problems moving forward.

Plots 804, 806,818,826,827,915,916,917,952

If there is a problem please let me know. If not, thanks much.

regards,

bill

Bill,

In the upper right hand corner of each packet is the Field Plot # we used. Elite Panel used Plots 801 thru 969. The book that I handed out has the Plot #'s that we used. We also have the name on each packet sent. The plots that you want deleted are: Plots 804, 806,818,826,827,915,916,917,952. They also have the names on them. Sorry about the inconvenience.

Charlie

Charlie:

Do you have a plot number or designation that is on the bag that I can use to ask Gary to drop those?  
I don't want to confuse him with additional numbers.

Bill,

Before I received this email, I sent the elite, and converted lines to Gary Pederson on Monday Jan.13 by FedEx. Overnight. I have not heard if he received it. If there is a problem you might want to send an email to him about the elite panel. I just talked to Darrell and he told me to email you about sending the panels. Gary's email address is : [Gary.Pederson@ars.usda.gov](mailto:Gary.Pederson@ars.usda.gov) I am sorry about the problem. If you want the material out of the panel, you need to contact him.

Regards,  
Charlie

Charlie:

After looking at the list of elite panel accessions, there are nine entries that probably should be deleted, as they haven't been released or they have been released with significant restrictions.

The entry numbers and source on the file are the numbers that you had provided to me when you sent the seed last spring.

If you've got any issues, please let me know and I'll give you a call.

Darrell - most of these are yours, but I expect they fall into that restricted category.....right?

regards,

bill
