Selahattin

Can you please fill out the following form and send it forward to Mr. Robert Brummett as he is the contact on this.

Regards,

Bill

Bill,

The best thing to do would be to have them submit a Material Request Form if they've not already done so (do you know if they have?). I'll be glad to send it to them, or you can (its attached).

Thanks for the heads up.

-Robert

Robert:

We would like to distribute F2 seed of some sweet x non-sweet populations to a faculty member in Turkey who is interested in mapping sweet sorghum QTLs. WE would provide seed of the F2 population and they would derive the population for evaluation in Turkey. This would be populations that we have not mapped but have used for breeding.

Let me know your thoughts and what we should do and can do to make this happen.

regards,

bill

Dear Dr. Rooney,

Have you had any news from the licencing office yet? please let me know, best regards...

Selahattin

It'll be very difficult to cross M81 with [REDACTED] because of the maturity. The only way to do it that I know of is to grow and cross them in the winter season under short days.

I have an F2 population of [REDACTED] that we are not using for mapping. If you would like that, I think that I can provide you with that material. Obviously you'll have to derived the RILs, but this should get you a little further down the line.

I have to check with our licensing office to make sure that they are okay with providing the material, but I don't expect anything major - you may have to sign a simple agreement indicating that you got the material from us. Either way, I'll let you know.

regards,

bill

Dear Dr. Rooney,

I hope you are doing well, and enjoying with summer time.

As you we have an ongoing project funded by National Science Foundation (TUBITAK), and the topic is about determination of the markers that affect the sugar rate in sorghum.

So far, we tried to establish the F1's, but unfortunately we could not produce F1. The reason is that [REDACTED] is not flowering in our environment or flowering very late, so we could not have a chance to cross with [REDACTED]. Right now we need to find or produce F1 that we can continue to the project.

What I am asking now that if you have any F1 population produced between [REDACTED] we ask you to help us to have some F1 seeds in order to finish this project. At the end when we have the paper to publish we are going to put your name on the paper.

So I look forward to hearing a good news from you, regards...
