Dr Heinrick

I hope you doing fine. I agreed with Ing. Rene Clara.

Our main objeive now is to transfer the thecnolgy of the utilization of Omega VI mills to small farmers and small food industries for flour production. We had now three mill prototypes made of wood, aluminun and metal for demonstrations.

We also would like to continue with the transference of sorghum utilization for food and beverages through promotion and workshop development . We had great impact until now and people continue demanding training.

best regards

Vilma

Dear Dr. Heinric,

I cannot open your attachment, please send it to me in word.

Can I send to you some proposals of technology transference in Spanish?

Some ideas of technology transference in Central América:

- 1 - We want to transfer seed of the improved varieties to the small farmers in Central America.
- 2 - We want to transfer in Central America the new varieties for silage with BMR genes, to improve the milk production.
- 3 - We want to transfer the mills Omega VI to the bakers so that they could produce his sorghum flour and mix it with that wheat flour in the making of bread, in El Salvador and Nicaragua.

Regards.

Asunto: Technology transfer

Rene and Vilma,

The attached document describing the new Technology Transfer project will be discussed at the INTSORMIL Program Advisory Committee Meeting in K.C. MO Dec. 3-4. During this meeting it is our objective to determine which technologies, developed by INTSORMIL, should be promoted with the additional funding received from USAID. Regional Coordinators will represent their region in this discussion but in the case that Bill or Lloyd cannot represent CA, I will. Thus, I want you to tell me which technology you would promote if you had the funding to do so. The criteria for selecting technologies is given in the attachment.

Thanks,

Short
