Hi Bill,

Steve and I have been talking of the best strategy for resynthesizing one of your hybrid A-lines, specifically [REDACTED]. What is your recommendation for the most efficient way for us to do this? Resynthesize the lines at Crosbyton this winter, pay you or another seed company to resynthesize the line for us? Other alternative? If we plant the lines in Puerto Rico this winter, we'd need ~ 1800 seeds from each parental line. Do you have these seed on hand? Could we get the seed from you or another source?

Thanks for your advice,  
Sharon
