---

Attached are two photos 34 is a sweet sorghum and 2120 is a grain sorghum.

As for the photo you attached, it is probably a grain sorghum, but I'm not completely sure because I can't see the relative size of the plants.

As for planting sugarcane, the typical time in the SE US would be late summer through very early fall.

Regards,

Bill

Hi Bill,

Could you pls help identify if this is sweet sorghum or grain? My photo editor picked up this pic that we want to use but we'd like to identify it accurately. Do let me know. Thanks! Megha
