We'll think this over and get back to you.

By the way, our GES Center just had a workshop this weekend called "Artist's Work in the Age of Biotechnology: Shaping our Genetic Futures". I had a good chance to talk with Rich Pell from the Center for PostNatural History. He had high compliments for the help that you provided to him years ago.

Hi Fred,

We probably have enough time to squeeze in one more cage trial with the gene-drive construct before we run out of Keck funds. When you get a chance, we should talk about how to set up an experiment that would answer questions about how quickly this element could introgress at different single-release ratios, and the impact of the fact that NHEJ alleles at the khw locus carry a significant load.

Best,

Tony
